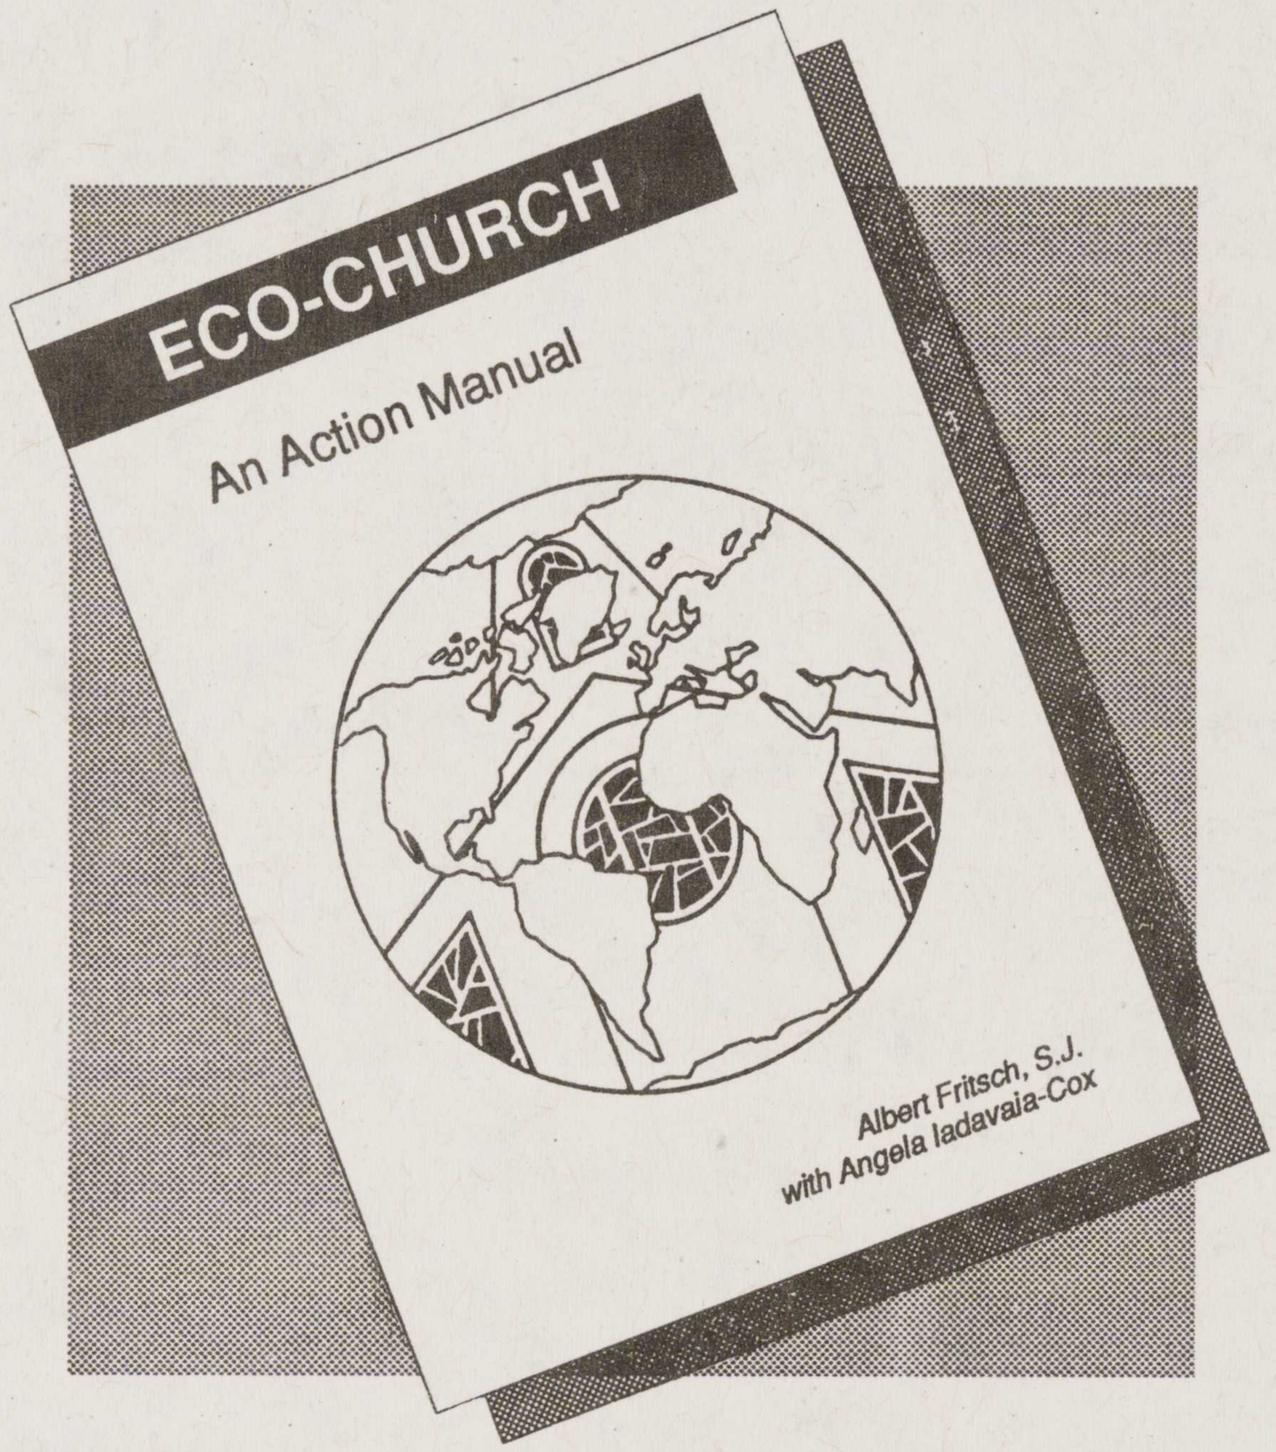
ECO-CHURCH
An Action Manual

Albert Fritsch, S.J.
with Angela Iadavaia-Cox



ECO-CHURCH ...is a tool you can use to help your congregation, your church camp, or church grow in its environmental awareness. Step-by-step, the authors move you through a clear and simple process. First, you audit your facility by asking questions. Next, you consider the ways worship can strengthen and enhance your environmental consciousness through another set of questions. From there you ask your members to evaluate their personal lifestyles, and finally you devise a plan of action that extends from your community to the larger world.

Numerous resources are woven through the process from groups that offer professional audits to specialized retreats on environmental concerns. An extensive list of organizations, books of interest, and educational programs are among the valuable resources found in the back of this book. If you want to encourage some changes in the way your community uses the Earth's precious resources, if you want to participate in the Earth's healing, if you want to foster serious reflection on personal lifestyles, **ECO-CHURCH** is the place to begin.
