An exploration of the natural world, led, in turn,
by three gifted scientists. § Bob Kovachick, TV
meteorologist and author currently concerned with
mounting dangers of catastrophic changes in our
atmosphere and climate. § Astronomer Lloyd Motz of
Columbia University, probing such questions as the
genesis of our universe, extra-terrestrial life, space travel.
§ Evolutionary biologist Hallie Kridler of the University
of Connecticut, tracing our species from the
development of Homo sapiens from Homo erectus and
considering our next billion years. § There'll be plenty
of free time for tennis, swimming, hiking, theater
and Tanglewood.
