

Figure 1.

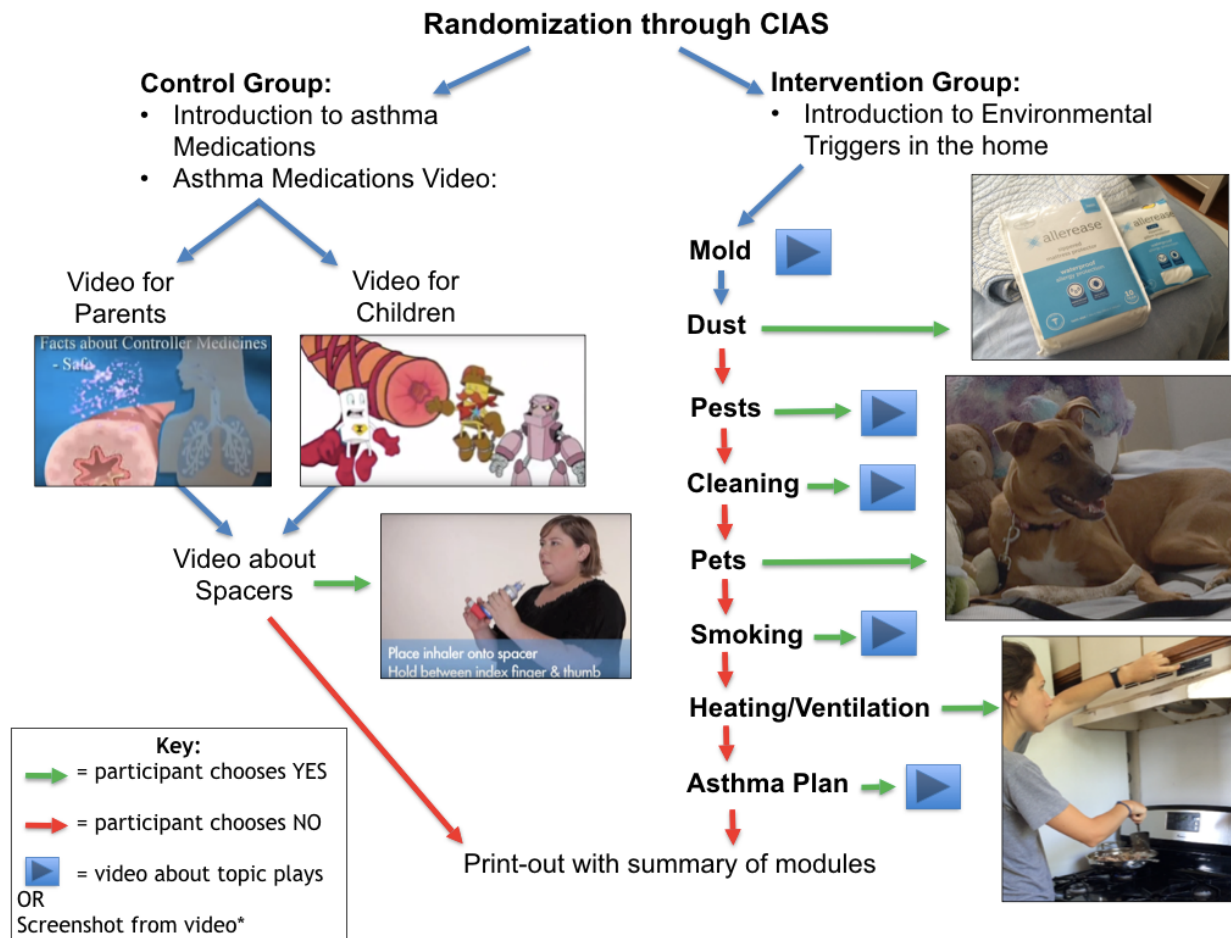

Figure 1. illustrates the individualized algorithm developed in CIAS for Phase 1 of the project. Participants in the intervention arm of the study choose which videos about environmental they would like to watch (indicated by green arrow). If they choose not to watch a video, they move onto the next one (red arrow). Participants in the control arm choose between a video an asthma medications video for parents or for children, and if they would like to watch a video on asthma spacers. All participants receive a print-out with a summary of the modules.
