

to the founding Caucasoid races mixing with other races. This is why the modern inhabitants of these countries look so different from the ancient inhabitants. A culture depends upon a certain kind and level of intelligence in order to sustain it. If this is withdrawn it collapses. History is just another subject totally distorted by the one-worlders. It is just not allowed to be mentioned that the ancient Egyptians, Sumerians, and Romans are not the same as the modern. The modern, white American is a totally different race from the race that occupied this continent two centuries ago. This sort of thing has happened in many other parts of the world too. It is precisely for this reason that I oppose the present policy of the one-worlders for massive Immigration.

9.- In case you aren't aware, these Immigrants have different intelligence and character traits than white Americans, or even black Americans for that matter. This is why their civilization is so vastly different from ours. Asians, for instance, are very good with mathematics, but they have a different sense of identity than we do. To an Asian, the group is more important than the individual. To Asians, an individual achieves happiness when he submerges himself in the group. This is a fundamental tenet of Asian philosophy and religion. We believe the complete opposite. It is only Western philosophy that prizes individualism. We believe that the individual achieves happiness when he achieves his personal destiny. It is not up to me to argue which view is correct. Perhaps both are correct and both are wrong. It is only up to me to point out that these two systems are incompatible. The intrusion of large numbers of people from one system will have disastrous effects on the other. You can't mix fire and ice. The intrusion of European Imperialism in Asia in the 19th century had a catastrophic effect on the receiving Asian cultures. They are still

in the process of recovering, by adaptation, from this today. The intrusion of large numbers of non-white Immigrants will have a fatal effect on us, as we do not have the cultural stability to absorb the blow.

10.- When the anti-racist marxist one-worlders talk jibberish about undocumented workers and their families having the same rights as American citizens, and opening our borders to the alien invasion they are proving beyond any doubt that they are the betrayers of the American people. They speak of the self-determination of all peoples, on the one hand, and deny the white peoples of America the right to their own self-determination and racial consciousness, on the other. America can't even employ its black citizens who were born here much less continue to keep its borders open to the world. And they tell us that the "Third wave technology" is creating a permanent class of unemployables - were is the logic in our outdated Immigration policies. Policies that in the end must lead to the total collapse of American society.

11.- As a racist I believe that races are different. As a white American I am proud of the contributions that my race has made to this nation and the world. I do not hold the other races in contempt or hate them, instead I am proud of my own people and I love them. I believe that we too have the right to self-determination and our own views. I believe that white Americans have a right to decide the destiny of their own country. And I hope that you do too.
