
Knowledge is open-ended in the sense that no matter how much we know, this is as nothing compared with what we know that we do not know. We all remember Sir Isaac Newton's remark about playing with pebbles of knowledge on the beach while the great ocean of scientific knowledge remains out there untouched before us—a magnificent and lofty thought.

One critically important premise of FEE's philosophy is this very lively awareness of the limits of our knowledge. In Leonard Read's own words, "Reflection reveals the fact that the more one knows, the more he knows he does not know." So, knowledge is open-ended in the sense of always being seen as incomplete. It is always only a fragment of that which is available to be known.
