

Drilling on the Outer Continental Shelf: #N00630. Vol. 4, No. 1. Four-page newsletter printed in two colors. Notes the production from those areas of the outer continental shelf of the U.S. where drilling has been done, and the potential yet to be proved. 1-99 copies, 10¢ each (minimum order \$2.50); 100 and over, 7¢ each.

Energy Balances: #N00645. Vol. 6, No. 1. Four-page newsletter, printed in two colors. Discusses the energy balances that exist among the energy users and energy sources of our society. 1-99 copies, 10¢ each (minimum order \$2.50); 100 and over, 7¢ each.

Natural Gas Serves Our Community: #N00165. Booklet and kit #N00160. 16 p. 1-10 copies, 25¢; 11 or more, 20¢ each. #N00170. For elementary grades 2-3. Cut-out kit of 28 pictures that describe the story of gas from the gas field to the community and its many uses there. Kit includes booklet #N00175. \$2.

Properties of Gas and Heat Energy Experiments: #N0085. Elbert C. Weaver. 17 experiments on properties of gas and 14 experiments on heat energy. Prepared on spirit duplication masters for easy reproduction by teacher for student use. For junior and senior high school. \$3.25.

Science Principles and Gas Appliances with Experiments: #N00500. Elbert C. Weaver. 1970. A 32-page booklet on science principles used in six gas appliances: range, home heater, water heater, clothes dryer, incinerator, air conditioner, with twelve classroom experiments. Materials for overhead projection and sample report sheet included. Grades 7-9. \$1.50.

LNG Goes to Sea: #N00620. Vol. 3, No. 1. Four-page newsletter printed in two colors on the subject of the growing world commerce in LNG: what it means to the U.S. shipbuilding industry, to the natural gas utility company and to the individual user of energy resources. 1-99 copies, 10¢ (minimum order \$2.50); 100 and over, 7¢ each.

Natural Gas Energy and the Environment: #N00650. Vol. 6, No. 2. Four-page newsletter, printed in two colors on the subject of the ecological implications of natural gas. Presents possible answers to two questions: (1) What are the ecological effects of burning fossil fuels for their heat energy? and (2) Can we predict how long our deposits of fossil fuels will last at present and projected rates of use? 1-99 copies, 10¢ each (minimum order \$2.50); 100 and over, 7¢ each.
