

moment. As you are well aware, every prediction in our Holy Bible has come true except for the last great world wide war. We have had (are Having) the start of the earthquakes, the stock market going up and down like a yo-yo, wild weather patterns, etc. etc.. This next war will be accompined by riots of great magnitude, world wide and diseases running rampant. AIDS will look like a common cold in comparison. No Christian Patriot will Be safe, unless he or she is in a comparitively safe location, such as the upper central part of the USA. This author is partial to the mountains Well away from any heavily congested area or military target.

Not only will there be danger from enemy action, there will be even more danger from roving bands of criminals and just plain starving people who will rob you and/or kill you on the off chance you could have something they could use. Also, there will be packs of dogs, half starved who will attack anyone in their way. Note; We have packs of dogs running wild now.

Those most vulnerable will be those living in or near any congested area. If these brothers and sisters fail to move to a safer area, before the balloon goes up, they will find themselves in grave danger, even though they are able to leave their area on foot (and I mean on foot) they will find it very difficult to almost impossible to reach any safe area.

Donot even think about leaving by motor-vehicle, especially if you live anyplace in Florida. There are cells in place right now, trained to blow up every bridge and overpass in the USA. A special report on this subject was submitted by one of our people who was able to infiltrate one of these cells, at great risk to his life. The bridges etc. will all be blown at once, Nation wide, on command. In the event no command is received these cells will act on their own at the instant they realize that the USA is under attack. Therefore, obviously, one would not be able to get very far if in fact one could even start in a motor vehicle at all. In view of the above, this author urges that, if you are unable to leave your area now be prepared to leave on foot, when the balloon goes up.

Those living in Florida are in a most precarious position from another source. Several studies have been made starting back in 1956, by the Military, C.D., FEMA and others, on the method to evacuate the State of Fla. in the event a major catastroph to include an enemy attack from Cuba, each study corroborated previous studies. Fla. cannot be evacuated in any orderly manner and neither can it be defended against an enemy landing force, too many beaches. Therefore, it is intended that the Military be quietly withdrawn before hostilities start and the Civilian population left to get out the best way they can. You can well imagine the hysteria that will result.

On top of this, if it is not enough, the Governor of Georgia has gone on record that no-one will be allowed to cross the Ga. border from any direction, and especially not from Fla.. He will have his hands full right at home in Ga. without adding any more people to his State.

This author is well aware of the problems facing all those who must live on a daily wage and those who have a small business that cannot be relocated in a safer area. Therefore, if it is not at all possible to relocate, at least move your home as far away from any congested area as you can and commute to work and be prepared to move out on foot at the first hint of something dangerous about to happen. If you are able to at least start by auto by all means doso, even a few miles covered before you have to t ake to your feet are a few miles you will not have to walk. Even if you find that you have moved too soon and it is a false alarm, it is better to make several false starts than to wait too long and find that it was the real thing and you are now trapped. Consider every false start a dry run and profit by the experience.
