The Moral Judgment of the Child

BY JEAN PIAGET

How does the child distinguish between right and wrong? Using the game of marbles as it is played by children, Piaget and his co-investigators find the child turning from simple motor behavior which is largely asocial, to an approach to marbles which is ritualistic. All attempts at experimentation are dropped and the rules of the game are followed exactly as they were laid down by older children or parents. The analysis includes discussions of lying, cheating, authority, punishment and responsibility; how the child learns mutual cooperation with other children; how the rules of the game can be changed. A critique of the theories of Durkheim and Fauconnet concludes the book.

Hunger and Work in a Savage Tribe

BY AUDREY I. RICHARDS

"Nutrition as a biological process is more fundamental than sex. In the life of the individual organism it is the more primary and recurrent physical want, while in the wider sphere of human society it determines, more largely than any other physiological function, the nature of social groupings, and the form their activities take."

Political Parties

BY ROBERT MICHELS

"Michels maintained that society cannot exist without a dominant or political ruling class, that the ruling class is the only factor of sufficiently durable efficacy in the history of human development. Here is anything but a book of flighty generalizations. Michels was a thorough student of the radical and trade union movements, and his references add up to a granary of information about their day-to-day workings. It is the facts rather than his inclinations which seem to him to prove that 'democracy leads to oligarchy, and necessarily contains an oligarchal nucleus.'" — *Antioch Review*
