The desktop guide for environmentalists, government officials, business leaders, development specialists, journalists, economists, professors, students, and concerned citizens

World 1992

From reviews of the *State of the World* series:

"Arguably a more accurate and provocative picture of the globe . . . than the State of the Union Address"
–Hugh Sidey, *Time*

"Has the courage to take a cool, scientific look at what is happening and try to figure out the causes"
–Flora Lewis, *New York Times*

"Carries a message of importance to policy planners of all nations"
–*Los Angeles Times*

"Carefully spelled out and documented" –*Washington Post*

"Points us wisely . . . toward a much stronger and better-supported interdisciplinary monitoring of indicators that bear on the chances for progressing toward a sustainable society" –*Science*

"Tries to deal with calamitous events rationally and constructively, and always offers logical solutions"
–*New York Review of Books*

"A brilliant series" –*Utne Reader*

New Book

Saving the Planet

How can we design a vibrant world economy that does not destroy the natural resources and environmental systems on which it depends? That is *the* question of the 1990s. And it's answered in *Saving the Planet: How to Shape an Environmentally Sustainable Global Economy.* This volume spells out the major restructuring of energy systems, materials use, population policies and international aid that would make the global economy sustainable. It shows how partially replacing income taxes with environmental taxes could cut personal income taxes by some 30 percent—while encouraging environmentally responsible enterprise.

State of the World 1992

State of the World 1992 can make you an active participant in the battle to save the planet. The annual ***State of the World*** series has won the acclaim of the world's leading policymakers, scholars, and environmental activists—many of whom consider it the "bible" of the environmental movement.

This ninth edition—all new material—presents the results of the Worldwatch Institute's latest "annual physical" of the planet. And the most timely thinking on remedies for the Earth's ills. It gives you the information you need to make intelligent environmental choices.

Our readings of the Earth's vital signs show a world at risk. The natural systems on which humanity depends are crumbling: The Earth's forests are shrinking, its deserts expanding, its soils eroding—all at record rates. The very temperature of the Earth appears to be rising, posing untold hazards for life on Earth.

Yet we can still make the 1990s the turnaround decade. **State of the World 1992** examines how we can best live with the millions of other species that our current way of life has placed in jeopardy. It sketches out how the world economy can make a smooth transition from fossil fuels to a solar/hydrogen energy system. And how to make our cities livable. The book concludes with a guide to the Environmental Revolution—how government, business, media, and individuals can help speed our passage toward an environmentally sustainable global economy.

About the State of the World Series

■ With worldwide annual sales topping 300,000, ***State of the World*** has become the most widely used analysis of public policy in the world.

■ ***State of the World*** has been published in all the major languages—Spanish, Portuguese, Arabic, Chinese, Japanese, German, Italian, Polish, French, Indonesian, and Russian—as well as many minor ones. It has appeared in more languages than the *Reader's Digest* — 26 in all.

■ ***State of the World*** is used by policymakers at all levels of government, from town councils to national capitals. Corporate managers and planners are among its most faithful readers. Its up-to-date information and penetrating analyses have made ***State of the World*** required reading in more than 1,300 courses in nearly 700 colleges and universities in the United States.

About the Worldwatch Institute

The Worldwatch Institute, founded in 1974, is an independent, nonprofit research organization based in Washington, D.C. Its goal: to help raise understanding of global environmental issues to the point where the public will support the policies needed to create an environmentally sustainable global economy.

Former Secretary of Agriculture Orville Freeman chairs Worldwatch's board. Lester R. Brown—the Institute's president and recipient of a MacArthur Foundation "genius award"— directs its research programs.
