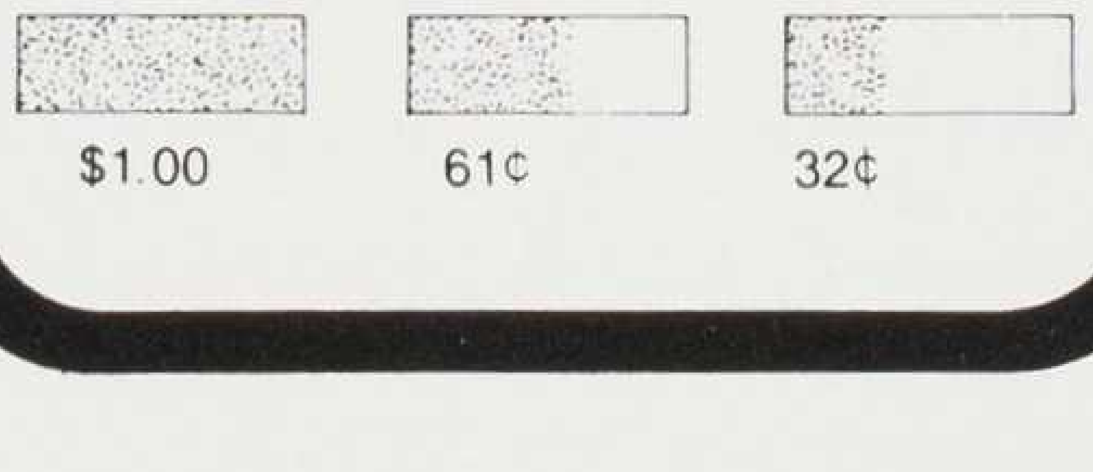
"Why do prices keep going up, UP, UP?"

FACT:

as the "money supply" grows, your dollar's purchasing power shrinks.



Prices keep rising because of the "money supply"—the total number of dollars people and companies have in their pocketbooks, bank accounts and cash registers.

Between 1945 and 1976, the U. S. money supply grew from $1,080 to $5,386 *per person.* But production didn't increase nearly as fast. That's the chief reason why a 1976 dollar will buy only as much as 32 cents would in 1945! How can we keep prices from rising? Our government has to stop increasing the money supply and we have to start producing more goods.
