

STOP THE TORTURE

Animal research continues only because the research industry is a closed system with a vested economic interest in continuing animal research, and because the general public has little knowledge of the horrors inflicted on laboratory animals behind closed doors and no role in determining how its tax money is spent.

Animal agony and scientific fraud will end only when the public demands accountability from animal experimenters and the U.S. government, which funds most of the research. Currently, there is a grass-roots uprising across the country against the infliction of unjustifiable suffering on animals in research laboratories. This movement must reach immense proportions if we are ever to see the day when no animal will have to suffer and die for so-called science. Please turn the page to find out how you can join this movement.

ARM!

Animal Rights Mobilization (ARM!)

is a national, grass-roots networking organization, with affiliated local groups across the country. ARM! believes that animal exploitation can be ended only through a popular mass movement for animals, and that the success of this movement depends upon the strength and vitality of local grass-roots groups. As a coordinating body, information clearinghouse, and resource center, ARM! is a unifying force at the heart of the grass-roots movement. By supporting **ARM!** you support **United Grass-Roots Action for Animals.**

All donations to Animal Rights Mobilization are tax-deductible
