

Winter doesn't call the tune here!

In many homes, winter may as well be miles away, instead of just outside the window. Floors are warm and draft-free. Rooms are summer-cozy.

Yet you'll see no radiators, no furnace registers. Why? Because dependable heat radiates from J&L Steel Pipes imbedded in the floor. They will stay on the job as long as the house stands . . . with nothing but comfort to tell they are there.

Long-lasting J&L "Jal-Duct" pipe for modern radiant heating is another example of J&L steels that meet the demands of home and industry.
